Jersey City, N.J., US, July 15, 2016 /MarketersMedia/ — Stone Pharmaceuticals, Inc. (OTCBB: STOP), a biopharmaceutical company focused on the development of novel, oral, FDA-approved products for the treatment of endocrine disorders and inflammatory diseases, announced today that its preclinical studies have demonstrated that the administration of STAMPYLON 15 mg once daily results in a four-fold increase in androgen receptor occupancy in patients with testosterone-associated voiding dysfunctions and has no discernible effect on prostate volume. Stone Pharmaceuticals, Inc. to Launch STAMPYLON 15 mg, a New Oral Treatment for Androgenic Alopecia and Voiding Dysfunction STAMPYLON 15 mg is being developed to provide physicians and patients a new, oral, FDA-approved treatment option for androgenic alopecia. The product candidate's preclinical studies demonstrated that STAMPYLON 15 mg is well-tolerated and increases androgen receptor occupancy to 90%. In the double-blind, placebo-controlled study conducted in men with androgenic alopecia, STAMPYLON 15 mg showed significant improvement in hair counts compared to placebo and an increase of androgen receptor occupancies of up to 88% [10]. STAMPYLON 15 mg has the potential to target the disease from the root of what is believed to be a multi-system disease: prolonged/chronic inflammation, which can be found in patients with androgenic alopecia. The STAMPYLON 15 mg product candidate will be available as a solid oral tablet formulation with active pharmaceutical ingredients (API) of 28.7% STAMPYLON and 7.8% TESPRO. The company plans to conduct a pivotal global Phase 3 double-blind, placebo-controlled study to further evaluate the efficacy and safety of STAMPYLON 15 mg. STAMPYLON 15 mg will be indicated for the treatment of androgenic alopecia in adults
